

Team Peace Sprint Retrospective

Date: 3/30/2024

What Went Well?

1. Yoshiki - We were all able to focus on our tasks and complete them without major delays. Due to the granular breakdown of tasks
2. Phong - The work we did on the security, login and registration came to fruition this sprint.
3. Jack - Productive vs Actual Hours is now demonstrated on the burndown chart.
4. Zarif - DAR Report MAPS API Decision stage was approved and now the entire report can be finished.
5. Devin - all code reviews went well and smooth

What Went Wrong?

1. Yoshiki - could have been more productive, if communication improved among team members.
2. Phong - Team needs to start implementing Front end testing and E2E Testing.
3. Jack - AWS was not setup this sprint or the last, we cannot prolong it.
4. Devin - Due to improper communication with the client we did not know of certain implementation methods for unit testing.

Action Plan

1. There are team members who have encountered similar problems, so those that are stuck should not be afraid to reach out for help.
2. Starting next sprint team will study and include front end testing and E2E for specific features.
3. AWS will be setup prior to the end of the next sprint(14).

4. Each team member needs to individually consult with the professor/client to determine implementation methods.

Notes

- Devin will be the next scrum master for Sprint 14
